

Support & Operations SOP and SLA Framework

InfusioTech Restaurant Ordering SaaS | Version 1.0 | 2 October 2026

Purpose

Defines an initial support workflow and proposed service targets for internal review; targets are not commitments until approved and contractually adopted.

Support Intake

- Capture tenant/outlet, reporter, contact, issue category, affected workflow, timestamp/timezone, app/build, device/browser, order/payment reference (avoid secrets), impact and evidence.
- Assign a ticket ID and acknowledge receipt through the agreed support channel.

Triage & Severity

- P1 Critical: suspected tenant data exposure, payment integrity issue or broad service outage.
- P2 High: core ordering or restaurant operations unavailable for a tenant with no safe workaround.
- P3 Normal: degraded feature with workaround or limited impact.
- P4 Low: how-to, cosmetic issue or feature request.

Proposed Initial Targets

- P1: acknowledge within 1 business hour during published support hours; continuous escalation only if an on-call service is formally staffed.
- P2: acknowledge within 4 business hours.
- P3: acknowledge within 1 business day.
- P4: acknowledge within 2 business days.
- These are proposed acknowledgement targets, not guaranteed resolution times or uptime commitments.

Incident Procedure

- Acknowledge and classify; establish scope; protect customer/payment data; assign incident lead; mitigate safely; communicate updates; verify recovery; document root cause and preventive actions.
- For payment issues, reconcile gateway state before manually changing records. For access issues, verify identity and audit access changes.

Escalation & Closure

- Escalate technical defects to engineering, payment issues to gateway operations, privacy/security issues to designated security/privacy lead and legal adviser as appropriate.
- Close only after customer confirmation or documented resolution, root cause/category and follow-up tasks.

SLA Items to Finalize

- Support hours/timezone; channels; acknowledgement and update cadence; service availability target; planned maintenance notice; exclusions; incident communication; data backup/recovery commitments; escalation contacts; service credits if any.
